

AI-NATIVE MEETING INTELLIGENCE PLATFORM

# Turn every meeting into structured action

7 autonomous AI agents extract tasks, assign owners, score confidence, and generate Minutes of Meeting — in under 60 seconds.

— THE PROBLEM WE ARE SOLVING

# Meetings produce work nobody tracks

Every meeting ends with verbal commitments — tasks, owners, deadlines. Within hours they vanish into chat threads, forgotten notes, and empty inboxes. No system closes the loop.

**55M**

meetings per day  
globally

**71%**

rated unproductive

meetings/yr

## No Automatic Task Capture

Action items are spoken aloud but never formally recorded. PMs manually write notes — a slow, error-prone process.

## Accountability Gaps

Without clear owner assignment and deadlines, tasks drift. Nobody knows who owns what until it's too late.

## Zero Manager Visibility

Managers have no real-time view of team workload, task completion rates, or escalations across all meetings.

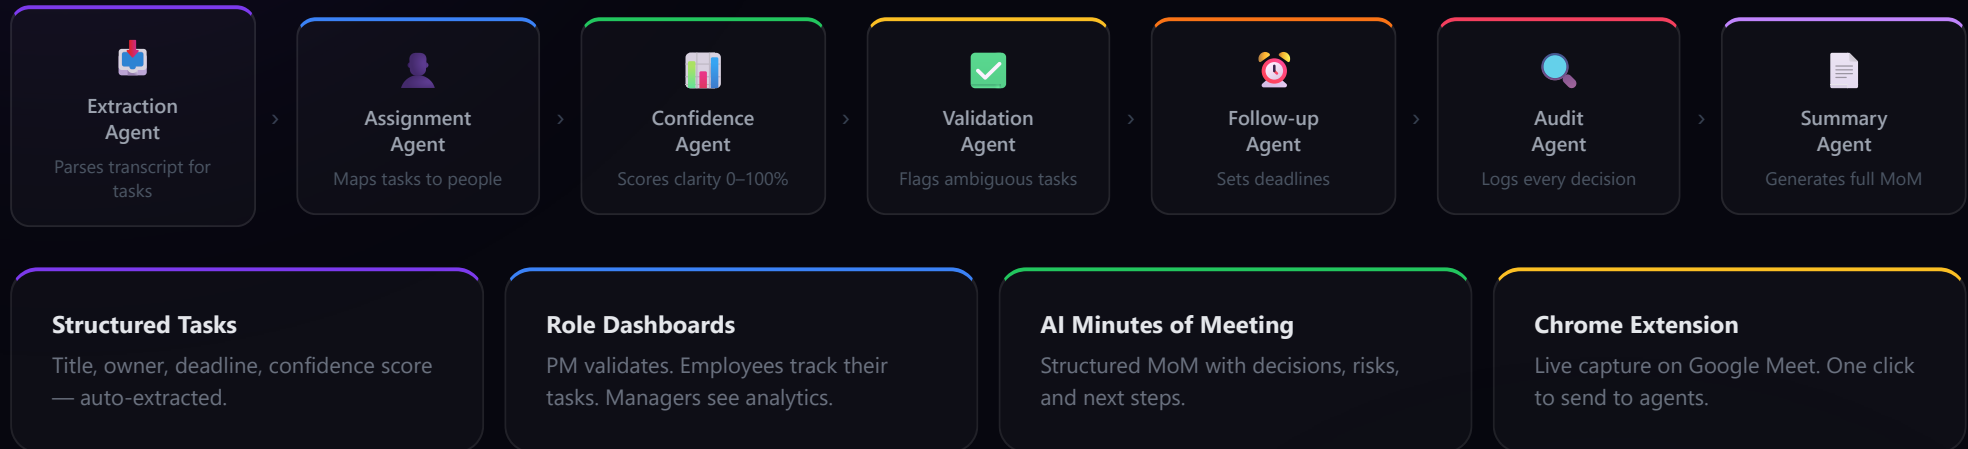

## Manual MoM Takes Hours

Writing structured Minutes of Meeting is time-intensive. Most teams skip it, losing institutional memory permanently.

— HOW COGNITION MEETINGOS WORKS

# A 7-agent AI pipeline that does the work after every meeting

Built on CrewAI + Groq LLaMA 3.3 70B. Agents run sequentially, each handing off enriched data to the next.

## — FROM MEETING TO ACTION — END TO END

### 1 Record on Google Meet via Chrome Extension

The Cognition extension runs silently during the meeting, capturing live speech with speaker labels. When done, the PM hits "*Send to AI Agents*". Company ID links the meeting to the right workspace. Transcript can also be pasted manually.

### 2 7-Agent CrewAI Pipeline Runs in Background

FastAPI triggers the async pipeline. Extraction → Assignment → Confidence → Validation → Follow-up → Audit → Summary agents execute sequentially. Tasks and MoM are written to Firestore. Average processing time: *30–60 seconds*.

### 3 PM Reviews & Validates AI-Extracted Tasks

The PM Dashboard shows a live meeting card. On click: tasks with confidence scores, approve/reject buttons, the full AI-generated Minutes of Meeting, and a complete agent audit trail. One-tap approval or edit.

### 4 Employees See Their Tasks Automatically

Each employee's dashboard shows only their tasks — assigned by name from the transcript. They mark tasks done, overdue, or escalate. Overdue detection runs automatically on login.

### 5 Manager Tracks Team Performance in Real Time

A live analytics dashboard shows task distribution (donut chart), team completion rates (ranked progress bars), department meeting breakdown, and escalation alerts.

## ROLE-BASED ACCESS

### Project Manager

PM

- › Upload / record transcripts
- › Approve / reject AI tasks
- › View full MoM + agent logs
- › Ask questions via AI chat

### Employee

Employee

- › See only their assigned tasks
- › Mark done / overdue / escalate
- › Filter by status

### Manager

Manager

- › Team task breakdown (donut chart)
- › Per-member progress bars
- › Department-wise meeting chart
- › Escalation alerts

## MULTI-TENANT

Each company gets a unique invite code. All data in Firestore is scoped to company ID — zero cross-tenant data leakage.
